

# Product Sheet: Large Bore Packer (LBP)

## Product Description

The Large Bore Packer (LBP), is a large through bore packer used when large flow areas are desirable. The bi-directional slips ensure that the packer will hold loads in both directions.

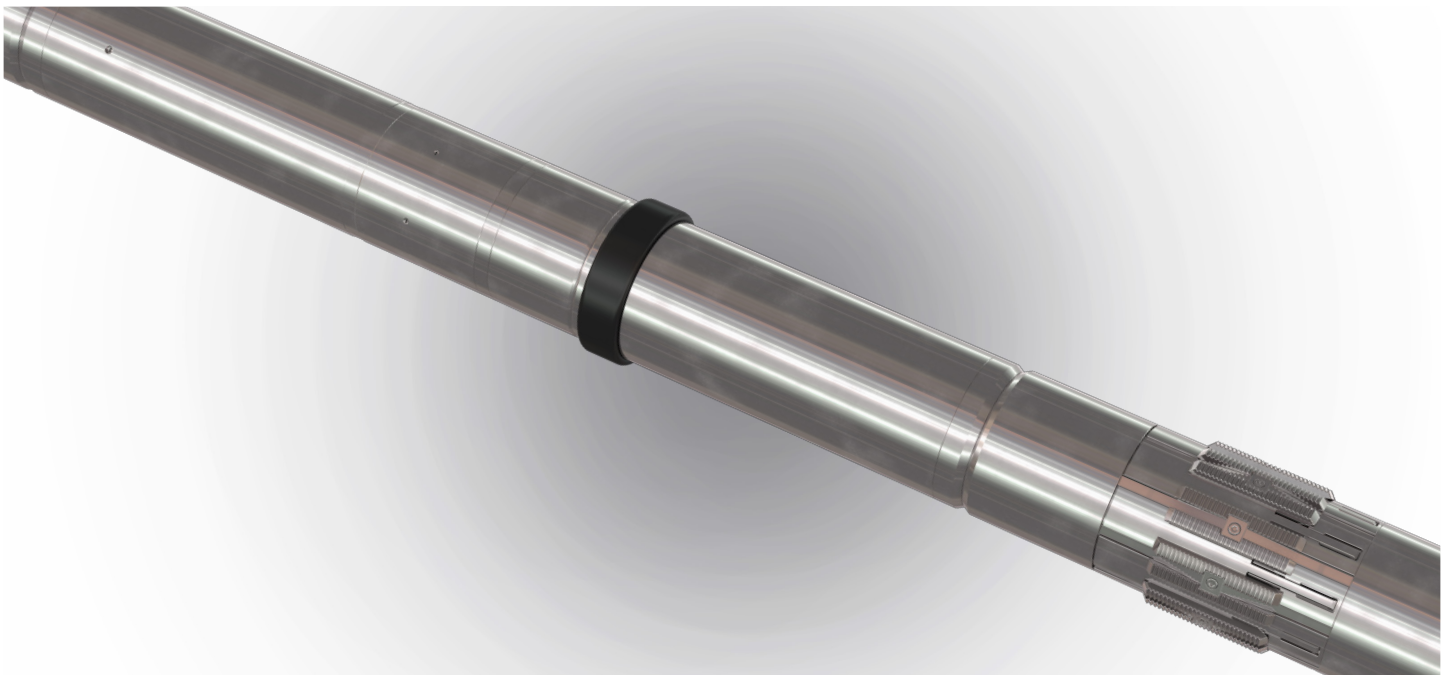

The LB has been qualified according to the ISO Standard V-O at 5000 psi and up to 100° C. This way the packer can function as a barrier until the flow device is opened. The packer can be left in hole during production for a later and time wise convenient retrieval.

## Product Application

The packer can be used with glass plugs, back pressure valves and in general any flow control device to ensure the packer bore is not the restrictive factor. Can be delivered upon request as Straddle.

## Product Benefits:

The Large Bore Packer (LBP) is excellent candidate for wells with scale build-up.

# Product Sheet: Large Bore Packer (LBP)

## Product Features

- Ideal for workover applications
- Large ID for large flow areas
- Equalize and retrieve with std GS in a single operation (no prong needed)
- Can be run on slickline, e-line, CT and Pipe
- Other sizes available upon request
