

# 1000 RECORDED RUNS WITH THE EST

The Electronic Setting Tool (EST) is a non-pre-pressurized, non-pyrotechnic setting tool for the installation of downhole products such as Retrievable Plugs and Barriers, Packers and Straddles. The Electronics Module controls and logs all installation parameters for quality assurance of the setting process. Operating parameters also include in-well temperature & pressure. After the product installation, a smart algorithm shuts down the EST to de-pressurize the tool and save battery for multiple operations.

- *Shortest setting tool available on the market*
- *Field resettable*
- *Debris tolerant, fully self-contained*
- *Pressure balanced, not affected by well pressure*
- *Bluetooth programmable & read out*
- *Pre-job tool status uploaded and verified before each run*
- *Enables the next in Integrated Operation for well intervention*
- *E-Line activated or Slickline (condition based)*
- *Max pressure 10,000 psi, temp 150C (battery operation)*
