

Expandable Junk Catcher Add-on (EJC-A)

Description

Our EJC-A is an add-on feature to our existing Bridge Plugs. It ensures that potential junk is caught inside a basket on top of the plug, and eases the retrieval of plugs in debris challenging operations. When assembled to a Bridge Plug the EJC-A funnels debris into the catcher where a flapper keeps the debris separated from the Plug.

The EJC-A and Bridge Plug can be set and retrieved in just one run, it's set with a standard setting tool and is designed with a GS style fish neck for retrieval from the wellbore.

Application

The EJC-A provides a safe solution to effectively collect debris within the wellbore.

Expandable Junk Catcher Add-on (EJC-A)

Benefits

- Can be run on Wire Line.
- Other sizes available upon request.
- Set and retrieve the EJC-A and Bridge Plug in one run.
- Retrieve with standard GS with DU and dedicated prong.
- Innovative swab-cup that effectively funnels debris into the catcher.
