

Tubing Packer

Description

The Tubing Packer (TP) is a packer for hanging off heavy loads in the well. The loads are carried via the packer main mandrel and the setting tool mandrel into the running string. This is achieved without interfering with the setting compression forces required for the element sealing. Hence, the tested and well proven technology from our standard plug and packer program is applied.

Application

The TP is ideal for hanging off heavy velocity strings, screen sections and swell packer sections in the well. Excellent candidate for wells with scale build-up Ideal for workover applications

Benefits

- Well proven technology.
- Heavy load capability.
- Retrieve with std GS in a single operation (no prong needed).
- Can be run on CT and Pipe.
- Medium expansion technology.
- Other sizes available upon request.

Technical Specifications (ME with prong)

Model	OD	ID	GS	Max Load
375-500	3,75"	1,77"	4"	22 ton
400-550	4"	1,968"	4"	22 ton
420-500	4,20"	2,64"	4"	22 ton
